Subject: FW: [EXT]Price Confirmation - Shiloh Church Road Site - D006/D008 Contaminated Soil

Chris,

As a friendly reminder. Below is a message from USE for Area 2 profile soil sampling and what parameters we need to test for and the frequency. We have sent ~170 tons to USE from area 2 so far. We have ~ 300 tons stockpiled on property 2.

Charlie,

You stated that you would be performing analytical in order to determine soil characteristics at your site, and this is what we would need for at least every 500 tons, although you might be doing more frequently than that to characterize your soils on site.

TCLP Metals
(TCLP Volatiles)
(TCLP Semi-Volatiles)
Total VOCs
Total SVOCs
PCBs

(If you have data showing no future need for the TCLP VOCs and SVOCs which you supplied with the bid documents, then only the Totals will be required).

If Doreen has anything else to add, or if I am wrong about something, she can reply. Thanks very much.

Doreen and Donna,
Good morning.

Thanks for sending over the approval letter. Will return later this morning.
We have a question on the letter so we are all on same page.
After the initial 300 tons what testing does USE want the site to perform and what is the volume frequency that USE would like testing done?
Thanks and we look forward to hearing from you.
